

## Languages (5.2)

Starting with the release of DGIS 5.2, the Languages screen displays a revised user interface but there has been no change in functionality.

Note: Under the Administration Tab>User Options there is a Languages checkbox. In order to override the default language based on your Country selection for an ADR or CMR form, this checkbox must be marked and the Administration Tab>Languages checkbox toggled on.

If the box is unchecked (no checkmark in checkbox), this will remove Languages from DGIS's left sidebar.

The Languages screen impacts the ADR shipping forms (ADR + Multimodal form and ADR+CMR form) and the TDG shipping form ('TDG + TDG').

ADR is the acronym for the "European Agreement concerning the International Carriage of Dangerous Goods by Road". The 'ADR + Multimodal' form and the 'ADR + CMR' form are intended for shipments between European countries.

TDG is the acronym for the Transportation of Dangerous Goods in Canada. When using the 'TDG + TDG' form the Shipper Address must always be Canadian.

### Administration Tab > Languages screen

The screenshot shows the DGIS Administration Tab > Languages screen. The top navigation bar includes "Home", "Parts", "Shipping Papers", "Administration" (selected), and "Help". The left sidebar lists "Settings" (User Options, User Preferences, Defaults, Signatures, Languages), "Administration" (Subscription Management, User Management, Locations, Custom Validation, Custom Overrides, Option Groups), and "Reporting" (User Activity, Parts, Regulation Access, Shipment History). The main content area is titled "Languages" and includes a "Revert" button and a "Save" button. The "User Interface Language" section has a dropdown menu set to "Default to browser". The "Shipping Papers Language Settings" section is divided into two columns: "ADR" and "TDG". Both columns have a toggle switch for "Enable Shipping Papers Languages Override" (currently off) and a "Primary Language" dropdown menu (set to "English").

Languages (5.2)

The User Interface Language drop-down list choices are English, Spanish, French, German, Dutch and Swedish.

Under the Shipping Papers Language settings, if you push the circle from left to right for ADR or TDG, then DGIS performs the following action.

Selecting this will override the validation of multiple languages on a single form.

What this means is that when you select an **ADR** shipping form the Shipment screen will display a Primary Language field and Secondary Language field (The language choices are English, French, Spanish, German, Dutch, and Swedish). If you chose a Language other than English then when you make your material selection at the Select Material window the choices given will be in the Non-English language that you had selected and those material properties will carry over to DGIS's Material screen.

## Languages (5.2)

### Material screen snippet

The screenshot shows the DGS (Dangerous Goods Information System) interface. The top navigation bar includes Home, Parts, Shipping Papers, Administration, and Help. The left sidebar has sections for Shipment (Current Shipment, Package - En carton (4G), UN1263, PEINTURES, 3, III, Manage Overpack, Drafts (21)), Manage (History, Templates, Package Marking, Settings), and Print (Shipments, Certifications). The main area is titled 'Classification' and contains the following fields:

UNID	Packing Group	Class	Sub-risk
UN1263	III	3	

Below these fields are buttons for 'Select Material', 'Transport Category (Tunnel Restriction Code)', 'Packages', 'Bulk', and 'Loading, unloading, and handling'. The 'Transport Category' field is set to '3 (E)'. The 'Operation' field is set to 'S2'. The 'Hazard Identification No.' field is empty. The 'Proper Shipping Name' field is set to 'PEINTURES'.

After you've completed the shipment and are ready to print the form, the document will print in the Primary and Secondary Language that you've selected.

When you select the **TDG** shipping form, a Primary Language field will be visible on the Shipment screen. There is no Secondary Language field.

The TDG Primary Language choices are English or French.

The screenshot shows the TDG (Transportation Dangerous Goods) Primary Language selection screen. The 'TDG' header is at the top. Below it is a toggle switch labeled 'Enable Shipping Papers Languages Override' which is turned on. Underneath is the 'Primary Language' section with a dropdown menu. The dropdown menu is open, showing two options: 'English' and 'French'. The 'French' option is highlighted in blue, indicating it is the selected language.

When French is selected as the Primary Language, the Material screen will list the material choices in French and the TDG form will also print in French.

You'll notice that in the upper right corner of the Administration Tab > Languages screen is a Revert button and Save button. If you perform an action on the Languages screen and click the Save button, the Revert button cannot be used (it's grayed out). The Revert button can only be used when you perform an action on the screen but have not yet clicked the Save button.
