

API (5.2)

Labelmaster Software has added functionality that allows DGIS web service customers and partners to create and manage their API Keys. These keys are generally assigned to a company and grants the users the ability to make API calls within their interface, whether the DGIS software is launched or not. This functionality allows greater security measures for web service testers and users, and management of these keys can be bestowed to a specific user or to Labelmaster Software Technical Support, upon request.

Setting up the API Key Tool

Once a web service license has been created for the DGIS customer, the license will be activated under the Administration tab after logging into DGIS.

After clicking on Subscription Management, the web service license can be added by clicking the Add License button. On the pop-window, type in the License Key, and click Add License to validate and add the license to your account.

A screenshot of a web application's 'Add License' pop-up window. The window has a light gray background and a thin black border. In the top right corner, there is a circular button with a gray 'X' icon. The main title 'Add License' is in a bold, dark blue font. Below the title, the text 'License Key' is displayed in a smaller, dark blue font. Underneath this is a large, rounded rectangular text input field with a light gray border and the placeholder text 'Enter your license key...' in a light blue font. At the bottom right of the window, there are two buttons: a white button with a blue border and the text 'Cancel' in blue, and a solid blue button with the text '+ Add License' in white.

On the next screen, click the pencil icon for the DGIS API license and check off the username for the account that will manage the API Keys for the company and click Save.

API (5.2)

Creating and Managing API Keys

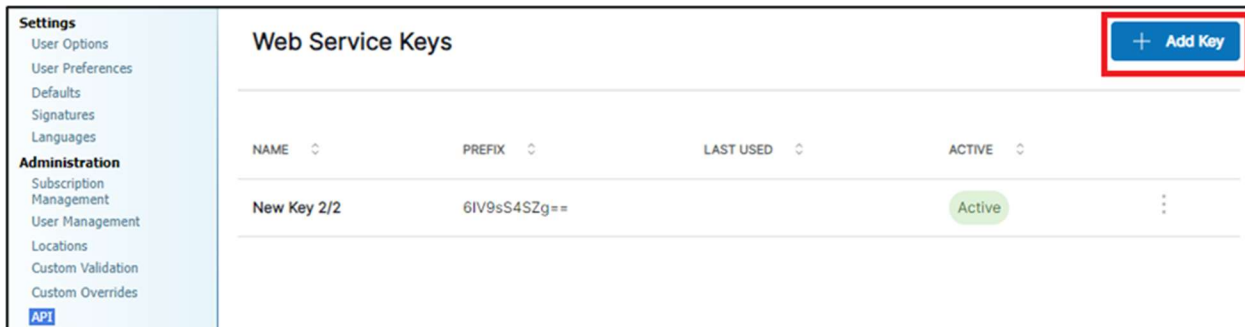

To create and manage API Keys, log in with the DGIS account that is set up with this right and click on API under the Administration tab. From here, you will see the name and prefixes for API Keys that were created within the API Key module. You can disable these keys by clicking the three dots and Disable. Keep in mind that once a key is disabled, it cannot be enabled again through the DGIS site.

The screenshot shows the 'Web Service Keys' page. On the left is a sidebar with 'Settings' and 'Administration' sections. The 'API' link is highlighted. The main content area has a title 'Web Service Keys' and an '+ Add Key' button. Below is a table with columns: NAME, PREFIX, LAST USED, and ACTIVE. There is one row with the name 'New Key 2/2' and prefix '6IV9sS4SZg=='. In the 'ACTIVE' column, there is a 'Disable' button and a three-dot menu icon, both highlighted with red boxes.

NAME	PREFIX	LAST USED	ACTIVE
New Key 2/2	6IV9sS4SZg==		Disable

To create a new API Key for the company, click on Add Key, type a name for the key, and click Add. The full, newly generated API Key will be displayed; this key will work right away and can be used in your interface to make API calls. You MUST copy this key and keep for your records since the full key will not be visible anywhere else. Once this page is closed, only the prefix will be visible on the Web Services page.
